Work Update Report

Today I completed testing the dashboard on the development environment. After successful testing, I deployed the new **bulk barcode functionality** to the live site. I also fixed several dashboard design and functionality issues to improve the overall user experience.

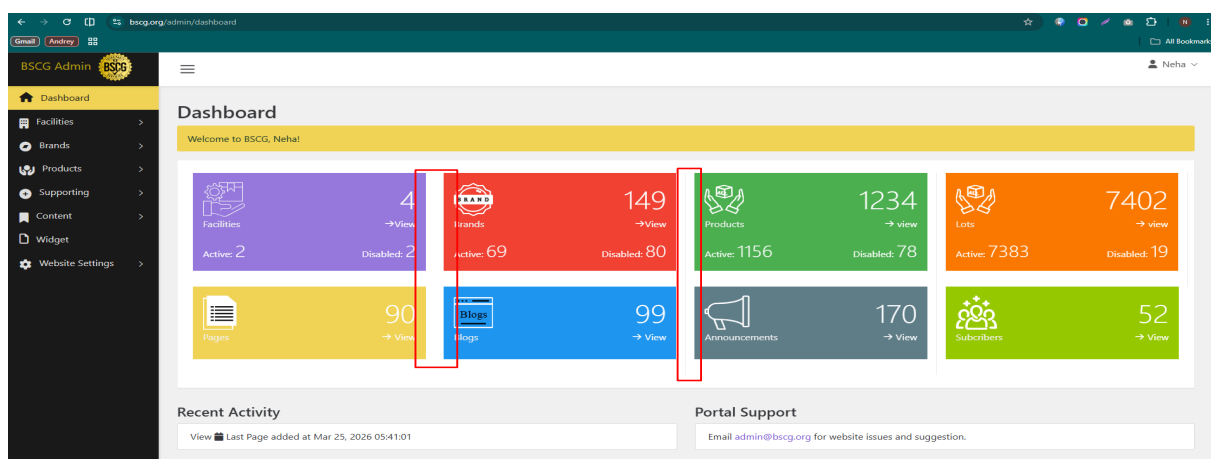

Additionally, I implemented an improvement for product image management. Previously, when product images were replaced or deleted, the old image files remained on the server, resulting in unnecessary storage usage. The new functionality now automatically removes the old image files from the server whenever an image is deleted or replaced. This will help keep the server clean, reduce unnecessary storage consumption, and prevent unused files from accumulating over time.

I am currently extending this same functionality to other modules, including:

- Programs
- Lots
- Pages
- Blogs
- Announcements

Once completed, these modules will also automatically remove unused files from the server whenever images are updated or deleted.
